

MOTIVATIONAL ESSAY

My name is _____ and I graduated the _____ High School, Mathematical-Informatics profile, in the City of _____, _____ County, June-July 2019 session.

Whether we like it or not, we want it or not, our world is governed today by figures, everything is measured in figures, we often get to speak in figures. Our life itself is also measured in numbers: so many hours of work, so much for rest, so much to eat, to study and so on. Therefore, hence the imperative need to know, whether minuscule, in this field, in this world of figures and if you have some real sense, you can say that you rule the world. Because figures never lie, or as Pythagoras said, "The world is driven by numbers." Hence the well-known analogy between figures and money, resulting in the line "*Time is money.*"

Starting from these prerequisites, I consider that one of the best, needed and sought-after jobs today is the accountant position. The official website of **The Bucharest Academy of Economic Studies**, through its educational offer from **The Faculty of Accounting and Management Information Systems** is the most suitable for someone who wants to know in detail the secrets of this job.

I have to mention the fact that I have learned this passion to think in figures from my grandmother who, in turn, finished the same faculty and although the years have passed, her passion is always alive, which motivates me, inspires me and, at the same time, unequivocally convinced myself to follow this path.

I believe that a good accountant, anchored in the reality of today, must prove solid knowledge in their field, he will always be up to date with the latest software necessary for the profession and not only, proving a sense of good knowledge in the field of informatics. He will have to be very ingenious, will be regularly informed about the new legislative regulations, and all of these together form solid arguments to counter the label that many put on this profession, accusing it of monotony.

Studying at this faculty, I am convinced that I will have the opportunity to learn from professionals, to attend classes held by passionate teachers and after three years of college, I consider it appropriate to deepen my studies through a master's degree in the field. And last but not least, I think internship practice is the process behind the training of the necessary skills at the time of hiring.

Since my high school years, I have been involved in various volunteer activities and experienced exchanges with high schools in France and Croatia in the Erasmus+ projects.

I am confident that what I have gained during this period will also be useful to me, for sometimes only punctual book science is not sufficient, interdisciplinary education is perhaps primary, and participation in as many activities as possible in various fields makes more valuable the years of study, but also much more beautiful.
